EXPERIENCE

AI/LLM Engineer II

April 2025 – Present

Phenom People

Hyderabad, Telangana

- Built an **LLM evaluation framework** (pass@k, LLM-as-judge rubric) gating every release across all 12 nodes, instrumented with LiteLLM and Langfuse for per-node cost, latency and full-trace auditability — continuously monitoring production agent behaviour and curbing hallucinations.
- Architected **chatbotCXAgent**, a production multi-agent system on **LangGraph** whose orchestration spans 12 nodes covering intent recognition, planning, dialogue-state management and tool routing, with **Graph RAG** retrieval over enterprise knowledge and document repositories via FAISS vector search and a Neo4j graph for multi-hop, policy-aware grounding.
- Engineered tool-calling agents that execute governed actions — database queries and structured extraction from unstructured documents — under **XGrammar constrained decoding** and schema-validated JSON guardrails, raising tool-routing accuracy to **91.9%** and eliminating malformed tool calls in live traffic.
- Designed the configuration and policy plane for an enterprise **hiring-integrity / fraud-risk platform**: a global fraud-signal registry with feature groups, tenant-scoped overrides and applicable-context gating, exposed through a **resolve API** consumed by the reviewer console and the live detection pipeline, with a role-gated signal-lifecycle state machine, definition versioning that keeps downstream consumers stable across configuration changes, and CEL-evaluated decision policies (score / condition to action).
- Building the detection and decisioning layer of that platform — an **LLM orchestration engine** that investigates flagged candidate activity, correlates evidence across signals and produces reviewer-facing assessments with supporting rationale — backed by a **policy-driven rules engine**, per-tenant risk configuration and audited review workflows across the signal lifecycle.
- Fine-tuned and served Qwen models via **QLoRA** (Unsloth, NF4) on **vLLM** / AWS g5.xlarge (A10G), sustaining 10.98 RPS at 98.6% success under load at roughly half the inference cost of hosted GPT-4.1.

Full Stack Engineer

May 2022 – February 2025

Blueleaves Farms

Hyderabad, Telangana

- Owned end-to-end delivery of production systems (POS, CRM, inventory, procurement, e-commerce) on Node.js, Firebase Cloud Functions and REST APIs — with role-based access control and CI/CD pipelines — integrating internal systems and cutting manual operational errors by roughly 90%.

PROJECTS

IndexNotes — AI Knowledge Graph for Scientific Papers | *Neo4j, Ollama, PyMuPDF, Python, Docker*

- Built an automated Graph RAG pipeline ingesting research papers (PDF to local-LLM extraction to structured JSON to Neo4j), creating 40+ concepts and 17+ typed relationships, with quantized local models via Ollama for entity and relationship extraction.
- Designed a Neo4j schema enabling multi-hop graph traversal and cross-document retrieval across scientific domains.

TECHNICAL SKILLS

Eval, Observability & Guardrails: LLM Evaluation (LLM-as-judge, pass@k), Langfuse, LiteLLM, Model Monitoring, Constrained Decoding (XGrammar), Schema Validation, Hallucination Mitigation, Role-Based Access Control

GenAI & Agentic Frameworks: Agentic / Multi-Agent Systems, LangGraph, LangChain, Tool/Function Calling, Prompt Engineering, Model Routing, Context-Window Management, RAG & Graph RAG, LLM Fine-Tuning (QLoRA, SFT)

Languages: Python, JavaScript, TypeScript, SQL, Bash

Backend & Infra: FastAPI, Node.js, REST APIs, Microservices, Docker, AWS (EC2/S3/SageMaker), GitHub Actions, CI/CD, Linux

ML & Serving: PyTorch, Transformers (BERT/ModernBERT), HuggingFace PEFT, Unsloth, vLLM, Embeddings / Vector Search (FAISS), Neo4j, Ollama, Production MLOps

Databases: PostgreSQL, Neo4j, MongoDB, Redis, Firebase

EDUCATION

Andhra Loyola Institute of Engineering and Technology

Vijayawada, Andhra Pradesh

Bachelor of Technology in Mechanical Engineering

August 2018 – May 2022
