EXPERIENCE

AI/LLM Engineer II

Phenom People

April 2025 – Present

Hyderabad, Telangana

- Architected **chatbotCXAgent**, a production multi-agent application on **LangGraph** (12 orchestrated nodes) spanning intent recognition, planning, dialogue-state management and tool routing — with RAG and **Graph RAG** pipelines over enterprise knowledge and document repositories via FAISS vector search and a Neo4j graph for multi-hop, policy-aware grounding.
- Engineered tool-calling agents that execute governed actions — database queries and structured extraction from unstructured documents — under **XGrammar constrained decoding** and schema-validated JSON guardrails, raising tool-routing accuracy to **91.9%** and eliminating malformed tool calls in live traffic.
- Built an **LLM evaluation framework** running automated evaluations (pass@k, LLM-as-judge rubric) that gate every release across all 12 nodes, instrumented with **LiteLLM + Langfuse** for per-node cost, latency and full-trace auditability — continuously monitoring agent behaviour and curbing hallucinations.
- Owned the inference cost of what I shipped: fine-tuned and served Qwen models via **QLoRA** (Unsloth, NF4) on **vLLM** / AWS g5.xlarge (A10G), sustaining 10.98 RPS at 98.6% success under load at roughly half the inference cost of hosted GPT-4.1.
- Building the detection and decisioning layer of an enterprise hiring-integrity platform — an **LLM orchestration engine** that investigates flagged activity, correlates evidence across signals and produces reviewer-facing decision support with supporting rationale — backed by a **policy-driven rules engine** and audited review workflows.
- Built that platform end to end as a full-stack product: a greenfield **FastAPI** micro-service on **MongoDB** with tenant-scoped configuration, exposed through an internal resolve API that **Temporal** workflows call at workflow start, and a **React** administration front end — feature store, audience rules, reviewer case and action centre — built to an existing design system and authenticated with **Keycloak**.
- Raised engineering quality across services: conversation analytics APIs migrated to **FastAPI** with automated testing coverage raised from **63% to over 90%** and SonarQube static analysis code smells cleared, and the self-hosted inference service packaged as **Helm** releases with **OpenTelemetry** code instrumentation feeding a production metrics dashboard, plus production support debugging from **ClickHouse** service logs.
- Work with **MCP (Model Context Protocol) servers** — ClickHouse, Playwright and Atlassian — through Claude Code as the tool layer in day-to-day agent development, debugging and issue tracking.

Full Stack Engineer

Blueleaves Farms

May 2022 – February 2025

Hyderabad, Telangana

- Sole engineer** on the whole stack — built the CRM and internal tools as **React** and **Vite** web applications, owning the user interface as well as the services behind it.
- Owned end-to-end delivery of production systems (POS, CRM, inventory, procurement, e-commerce) on Node.js, serverless Firebase Cloud Functions and REST APIs — with role-based access control and CI/CD — integrating multiple internal systems and cutting manual operational errors by roughly 90%.
- Ran customer discovery directly with business stakeholders — **shareholders, company VPs** and external partner businesses — to scope projects and implementations, translating their operational asks into technical designs and delivering them end to end.

TECHNICAL SKILLS

GenAI & Agentic: Agentic / Multi-Agent Systems, LangGraph, LangChain, Tool/Function Calling, Prompt Engineering, RAG & Graph RAG, Embeddings / Vector Search (FAISS), MCP Servers, Model Routing, LLM Fine-Tuning (QLoRA, SFT)
Evaluation & Observability: LLM Evaluation (LLM-as-judge, pass@k), Langfuse, LiteLLM, OpenTelemetry, Model Monitoring, Constrained Decoding (XGrammar), Schema Validation, Hallucination Mitigation
Languages & Full-Stack: Python, TypeScript, JavaScript, SQL, React, Vite, Micro-Frontends, FastAPI, Node.js, Express.js, REST APIs, Microservices, Design Systems, Keycloak, OAuth / SSO
Cloud & Delivery: AWS (EC2/S3/SageMaker), Docker, Helm, Temporal, Kafka, GitHub Actions, CI/CD, Linux
Databases: PostgreSQL, MongoDB, Neo4j, ClickHouse, Redis, Firebase
ML & Serving: PyTorch, vLLM, Transformers (BERT/ModernBERT), HuggingFace PEFT, Unsloth, Ollama, Production MLOps

EDUCATION

Andhra Loyola Institute of Engineering and Technology

Bachelor of Technology in Mechanical Engineering

Vijayawada, Andhra Pradesh

August 2018 – May 2022
