EXPERIENCE

AI/LLM Engineer II

April 2025 – Present

Phenom People

Hyderabad, Telangana

- Built the fraud-risk configuration service greenfield — a backend service in **FastAPI** on **MongoDB** with a signal registry, feature groups, audience and scope definitions, and tenant-scoped overrides — exposed through an internal resolve endpoint that **Temporal** workflows call at workflow start to decide which fraud signals apply to a candidate and job.
- Built the fraud administration front end in **React** — feature store, audience rules, tenant provisioning, and a case and action centre for reviewers — authenticated through the chatbot authentication service with **Keycloak**, and built to an existing design system and Figma specs.
- Merged fraud-risk resolve into the interview-intelligence **Temporal** workflows and removed the **Policy Engine** gating that had decided which checks to run, making the configuration service the **single source of truth** and replacing hardcoded per-tenant flags with audience rules resolved per candidate.
- Built conversation analytics APIs covering both live-agent and WhatsApp channels, raised the service's test coverage from **63% to over 90%** while clearing static-analysis code smells, and migrated the service to **FastAPI**.
- Built candidate-facing UI components in the **micro-frontend** widget — a conversation summary API and view, an integrity-check modal, live-signal aggregation, location typeahead, and in-modal video playback.
- Owned tenant provisioning and delivery for the platform — provision and unprovision APIs with region-scoped tenant listing, containerised deployment via **Docker** and **Helm** across staging environments, and production support debugging by querying service logs in **ClickHouse** to resolve customer tickets.
- Architected **chatbotCXAgent**, a production multi-agent system on **LangGraph** (12 orchestrated nodes) spanning intent recognition, planning, dialogue-state management and tool routing — with **Graph RAG** retrieval over enterprise knowledge and document repositories via FAISS vector search and a Neo4j graph.
- Ran the self-hosted LLM inference service as a deployable platform — Helm-packaged releases, custom chat templates per model, and **OpenTelemetry** instrumentation feeding a metrics dashboard so per-model latency and throughput were visible in production.

Full Stack Engineer

May 2022 – February 2025

Blueleaves Farms

Hyderabad, Telangana

- Owned end-to-end delivery of production systems (POS, CRM, inventory, procurement, e-commerce) on Node.js, Firebase Cloud Functions and REST APIs — with role-based access control and CI/CD — integrating multiple internal systems and cutting manual operational errors by roughly 90%.
- **Sole engineer** on the whole stack — built the CRM and the other internal tools as **React** and **Vite** web applications, owning the interface as well as the services behind it.
- Built data-driven analytics on large-scale transactional and stock-movement data — demand forecasting, sales-trend and inventory models that surfaced discrepancies and improved procurement and replenishment decisions across 5+ locations and 10,000+ monthly transactions.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, Bash

Backend & Cloud Infrastructure: FastAPI, Node.js, Express.js, REST APIs, Microservices, Docker, Helm, Temporal, Kafka, AWS (EC2/S3/SageMaker), GitHub Actions, CI/CD, Linux

Frontend & Auth: React, Vite, Micro-Frontends, Keycloak, OAuth / SSO, Design Systems, Role-Based Access Control

Databases: PostgreSQL, MongoDB, ClickHouse, Redis, Neo4j, Firebase

GenAI & Agentic: Agentic / Multi-Agent Systems, LangGraph, LangChain, Tool/Function Calling, RAG & Graph RAG, Prompt Engineering, LLM Evaluation (LLM-as-judge, pass@k), OpenTelemetry, Embeddings / Vector Search (FAISS), vLLM

EDUCATION

Andhra Loyola Institute of Engineering and Technology

Vijayawada, Andhra Pradesh

Bachelor of Technology in Mechanical Engineering

August 2018 – May 2022
