EXPERIENCE

AI/LLM Engineer II

Phenom People

April 2025 – Present

Hyderabad, Telangana

- Designed the configuration and policy plane for an enterprise **hiring-integrity / fraud-risk platform**: a global fraud-signal registry with feature groups, tenant-scoped overrides and applicable-context gating, exposed through a **resolve API** consumed by the reviewer console and the live detection pipeline — including a role-gated signal-lifecycle state machine, definition versioning that keeps every downstream consumer stable across config changes, and CEL-evaluated decision policies (score / condition → action).
- Building the detection and decisioning layer of an enterprise **hiring-integrity / fraud-risk platform** — an **LLM orchestration engine** that investigates flagged candidate activity, correlates evidence across signals and produces reviewer-facing assessments with supporting rationale — backed by a **policy-driven rules engine** (score / condition → action), per-tenant risk configuration and audited review workflows across the signal lifecycle.
- Built the evaluation and observability layer gating every release across all 12 nodes (pass@k, LLM-as-judge rubric), instrumented with **LiteLLM + Langfuse** for per-node cost, latency and full-trace auditability — continuously monitoring agent behaviour and curbing hallucinations.
- Engineered tool-calling agents that execute governed actions — database queries and structured extraction from unstructured documents — under **XGrammar constrained decoding** and schema-validated JSON guardrails, raising tool-routing accuracy to **91.9%** and eliminating malformed tool calls in live traffic.

Full Stack Engineer

Blueleaves Farms

May 2022 – February 2025

Hyderabad, Telangana

- Owned end-to-end delivery of production systems (POS, CRM, inventory, procurement, e-commerce) on Node.js, Firebase Cloud Functions and REST APIs — with role-based access control and CI/CD — integrating multiple internal systems and cutting manual operational errors by roughly 90%.
- Built data-driven analytics on large-scale transactional and stock-movement data — demand forecasting, sales-trend and inventory models that surfaced discrepancies and improved procurement/replenishment decisions across 5+ locations and 10,000+ monthly transactions.

PROJECTS

NorthStar — Motorcycle Navigation Companion App | *Android, Kotlin, BLE, Maps SDK*

- Built and shipped a companion app for the Royal Enfield Tripper Dash, delivering turn-by-turn navigation to the bike's connected instrument cluster and growing an organic user base without paid distribution; the traction drew Royal Enfield's attention directly, leading to an on-site collaboration visit at their HQ.

IndexNotes — AI Knowledge Graph for Scientific Papers | *Python, Neo4j, Ollama, Docker*

- Built an automated Graph RAG pipeline ingesting research papers (PDF → local-LLM extraction → structured JSON → Neo4j), creating 40+ concepts and 17+ typed relationships, with quantized local models via Ollama for entity/relationship extraction.

TECHNICAL SKILLS

Backend & Infra: Node.js, Express.js, FastAPI, REST APIs, Microservices, Docker, AWS (EC2/S3/SageMaker), GitHub Actions, CI/CD, Linux

Databases: PostgreSQL, MongoDB, Redis, Firebase, Neo4j

Languages: Python, JavaScript, TypeScript, SQL, Bash

Eval, Observability & Guardrails: Langfuse, LiteLLM, Model Monitoring, Schema Validation, Role-Based Access Control, LLM Evaluation (LLM-as-judge, pass@k), Constrained Decoding (XGrammar)

GenAI & Agentic: Agentic / Multi-Agent Systems, LangGraph, LangChain, Tool/Function Calling, RAG & Graph RAG, Model Routing, LLM Fine-Tuning (QLoRA, SFT)

ML & Serving: PyTorch, Transformers (BERT/ModernBERT), vLLM, Unsloth, Embeddings / Vector Search (FAISS), Ollama, Production MLOps

EDUCATION

Andhra Loyola Institute of Engineering and Technology

Bachelor of Technology in Mechanical Engineering

Vijayawada, Andhra Pradesh

August 2018 – May 2022
